M.F.A PEDATRIC CPR & FIRST AID This course will deal with three age groups (Infant, Child & Adult) and specialize with the treatment of life-threatening events involving children. Accidents are the leading cause of death in children, so knowing CPR and first aid can help reduce the number of deaths. We provide an environment that does not suppress the need to explore & develop. The programs goal is to help you gain the core knowledge, skills & confidence necessary to provide effective emergency care until professional emergency medical care is available. ***Tuition \$50.00**

M.F.A PEDATRICPLUS CPR & FIRST AID This course will deal with three age groups (Infant, Child & Adult) and specialize with the treatment of life-threatening events involving children. Accidents are the leading cause of death in children, so knowing CPR and first aid can help reduce the number of deaths. This course also includes the use of automated external defibrillators (AED's) when responding to a person experiencing sudden cardiac arrest. We provide an environment that does not suppress the need to explore & develop. The programs goal is to help you gain the core knowledge, skills & confidence necessary to provide effective emergency care until professional emergency medical care is available. ***Tuition \$50.00**

M.F.A BASICPLUS CPR & FIRST AID provides specific (Adult) training information & skills that a first aid provider must know, perform & provide for effective emergency care of specific illnesses and injuries before EMS arrives. This course meets the National Guidelines for First Aid Training in Occupational Settings & provides compliance with minimum Occupational Safety & Health Regulations. This course also includes the use of automated external defibrillators (AED's) when responding to a person experiencing sudden cardiac arrest. Sudden cardiac arrest is one of the leading causes of death in occupational settings. A defibrillator is the only definitive treatment. AED's are used prior to arrival of EMS and are an integral component of the *Chain of Survival*. The first few minutes of care are critical for someone experiencing sudden cardiac arrest. ***Tuition \$50.00**

M.F.A BASIC CPR & FIRST AID This course will deal Adult and specialize with the treatment of life-threatening events involving children. Accidents are the leading cause of death in, so knowing CPR and first aid can help reduce the number of deaths. We provide an environment that does not suppress the need to explore & develop. The programs goal is to help you gain the core knowledge, skills & confidence necessary to provide effective emergency care until professional emergency medical care is available. ***Tuition \$50.00**

MEDIC FIRST AID BLOODBORNE PATHOGENS deals specifically with the occupational risk of being exposed to diseases that may be found in the blood or body fluids of another person. Primary bloodborne pathogens addressed by the OSHA Standard, 29 CFR 1910.1030, and focuses on Hepatitis B virus, Hepatitis C virus, Human immunodeficiency virus (AIDS). Goals are to help you gain the core knowledge and understanding of recognizing your risk of exposure to potentially infectious materials and the ability to take the necessary precautions to reduce or eliminate it when faced with the possibility of exposure. ***Tuition \$35.00**

Medic First Aid Emergency Care is designed to train individuals and corporations that require training in basic first aid skills. This program will provide first aid training to students, giving them the skills necessary to manage illnesses and injuries until the arrival of EMS . Emergency Care is designed to complement cardiopulmonary resuscitation (CPR) training in order to meet OSHA requirements for first aid training in the workplace. ***Tuition \$50.00**

Medic First Aid Oxygen Administration the trained first aid provider will learn the importance of introducing oxygen as an integral part of the care provided for an ill or injured patient. Supplying emergency oxygen helps meet the ill or injured patient's critical need for oxygen. When illness or injury reduces the body's ability to process oxygen, shock will soon occur unless the effects of the decreased amount of oxygen in the blood can be reversed. ***Tuition \$40.00**

American Heart Association HealthCare Provider This course is designed to teach the skills of CPR for victims of all ages, it includes use of an automated external defibrillator and relief of foreign-body airway obstruction. It is intended for participants who provide health care to patients in a wide variety of settings.

*** Tuition \$50.00**
